Key point

The components that act on road safety are road, vehicle, driver. The vehicle and the road are in many cases the place of the drivers' work, and the conference is to analyze the risk factors with a multidisciplinary approach involving specialists of different fields. The visual system, the skeletal system, the respiratory tree and the gastro-enteric apparatus operating in optimal conditions are always important for a guide in conditions of safety, and are longer when the driver is a professional subjected to conditions of stress and increasing responsibility. The Decree of 22 December 2015 transposing Commission Directive 2014/85 / EU, speaking mainly on the prevention of falling asleep, tied in most to sleep apnea syndrome, provides an analysis in a context dedicated to professionals. The guarantee of the workplace, the staff and everything that revolves around is the main goal of occupational medicine and specialists who deal with various pathologies.

**Accredited CME for
Biologists, Dietitians, Pharmacists, Physiotherapists, Nurses, Therapists,
Surgeons, Dentists, Orthoptists, prevention technicians in 'environment and
in the workplace**

Registration for the conference is free but limited to a maximum of 100 participants.
